

Travel by land, sea or air just about anywhere and you will encounter transportation infrastructure and systems that AECOM has planned, designed or managed.

As Australia's population grows, so does demand for safe, practical, cost-effective methods of transportation. AECOM explores new ways to navigate challenging projects and finds smarter solutions that deliver better outcomes for clients.

This can mean delivering new transportation systems or restoring ageing infrastructure to find more sustainable ways to move people and freight across our country and beyond.

AECOM specialises in safe, reliable end-to-end solutions, including:

- Freight and rail: from planning and advisory services through to operations and asset management of infrastructure, rolling stock and equipment
- Ports and marine: planning and engineering across container terminals, bulk ports, harbours and channels, cruise facilities and naval services
- Aviation: from master planning and environmental assessments to asset management and fuel facilities for airline and airport owners to bank, defence and government clients

This takes a team of planners, designers, engineers, environmental specialists, advisors, scientists and economists. This is AECOM and that's why it's 45,000 talented professionals across 125 countries have been ranked by Engineering News Record as the top global designers in transportation for 10 consecutive years.

It's all part of AECOM's united purpose of creating, enhancing and sustaining the world's built, natural and social environments to create a better world in which to work and live. Find out more at www.aecom.com.
