

GHD is one of the world's leading engineering, architecture and environmental consulting companies.

Established in 1928, GHD employs more than 6500 people across five continents and serves clients in the global markets of water, energy and resources, environment, property and buildings, and transportation.

The cornerstone of our business is our client-centred culture and teamwork-based approach known as One GHD. Operating globally and delivering services locally, we are united by the core values of Teamwork, Respect and Integrity.

Wholly-owned by its people, GHD is dedicated to understanding and helping our clients achieve their goals. Our global network of engineers, architects, planners, scientists, project managers and drafters collaborate to improve the built, economic and social environment of the communities in which we operate.

GHD is committed to sustainable development, safety and innovation. We care for the wellbeing of our people, assist communities in need and conduct business in an ethical and environmentally responsible manner.

GHD operates under a Practice Quality Management System, ISO 9001:2008 and an Environmental Management System, ISO 14001:2004 which are certified by Lloyds Register Quality Assurance.

Getting the right priorities in place to deliver efficient, reliable and well-planned transportation systems are fundamental to a community's economic prosperity and quality of life.

GHD specialises in [Transport Strategy & Economics](#), [Rail, Roads & Highways](#), [Aviation and Maritime & Coastal](#).

Economic and population growth, greater urbanisation and increased mobility are boosting demand for new infrastructure and straining the capacity and effectiveness of existing infrastructure. Single mode approaches are no longer viable as governments and stakeholders recognise the need for multi-modal solutions across the whole supply chain.

Across the whole transport spectrum of aviation, marine, roads and highways, rail and transportation and logistics, our team provides integrated transport services throughout the project lifecycle from initial policy, transport economics and business case advice, through concept, procurement, detailed design and construction to operations, maintenance and asset management.

We help clients develop sustainable solutions which balance infrastructure investment with demand reduction, land use strategies and system efficiencies.
